

**TABLE SLD-1A - DETERMINING PREDICTED ACHIEVEMENT
FOR INTELLIGENCE AND ACHIEVEMENT TESTS WITH STANDARD DEVIATIONS OF 15
INCLUDING OBTAINED ACHIEVEMENT CUT-OFF SCORES NECESSARY TO DETERMINE A DISCREPANCY**

DIRECTIONS:

1. Enter Column 1 by locating the obtained IQ.
2. Find the predicted achievement (PA) score in Column 2 directly opposite to the right of the obtained IQ.
3. Find the beginning obtained achievement (OA) score necessary to determine a severe discrepancy (-16 points or below) in Column 3 to the right of the PA. Any score equal to or less than this cut-off number indicates where a severe discrepancy begins for the IQ and PA.

EXAMPLE: Column 1 - IQ = 117,
Column 2 - PA (Predicted Achievement) = 111,
Column 3 - Obtained Achievement Cut-Off Score (and below) Necessary for Discrepancy = 95
(In other words, 95 or below indicates the score where the severe discrepancy (-16 points) begins.)

Column 1 Obtained IQ	Column 2 Predicted Achievement	Column 3 Obtained Achievement Cut-off Score	Column 1 Obtained IQ	Column 2 Predicted Achievement	Column 3 Obtained Achievement Cut-off Score
142	127	111	98	99	83
141	127	111	97	98	82
140	126	110	96	97	81
139	125	109	95	97	81
138	125	109	94	96	80
137	124	108	93	95	79
136	123	107	92	95	79
135	123	107	91	94	78
134	122	106	90	94	78
133	121	105	89	93	77
