

IPT Certification with PowerTeacher Pro Certification

## **PowerSchool SIS: Initial Product Training (IPT) with PowerTeacher Pro - Train the Trainer Certification**

### **Brief Course Description:**

The PowerSchool SIS and PowerTeacher Pro Initial Product Training (IPT) Certification focuses on how end-users apply PowerSchool Student Information System (SIS) and PowerTeacher Pro gradebook functions and processes in their day-to-day school responsibilities.

Upon the completion of this one-week certification course, the candidate can facilitate IPT to their LEA/District: This would include all PowerSchool SIS administrators, school secretaries, principals, counselors, registrars, and teachers using PowerSchool materials and curriculum. You will be expected to train all personnel who will use PowerSchool in your district

**Train the Trainer Course:** The attendee will be responsible for attending all 5 days of the course, expected to complete exercises, expected to deliver a brief training presentation and be responsible for the redelivery of this material to your LEA/District. All Attendees will be provided with documentation to use back at your LEA's to deliver this curriculum.

### **Critical to send the proper personnel to this training:**

**Who Should Attend?** PowerSchool Administrators, LEA/District SIS trainers/ Personnel that understand Chalkable database; Data Managers; Strong trainer/teachers who can return back to their LEA develop a training plan to train end users on all aspects of the Student Information System.

## **PowerSchool SIS: Reporting Certification**

### **Brief Description of Course:**

The Reporting Certification course focuses on the many techniques you can use within PowerSchool Student Information System (SIS) to extract data and share it with others. Learn how to create reports using Object reports, ReportWorks, to build traditional and standards-based report cards, transcripts, field trip rosters and class rosters as well as learn to customize reports for your LEA.

Learn to use Enterprise Reports and Apex Builder to build data base reports that utilizes SQL query builder. Reports such as CRT/NRT test score for data analysis, attendance data, D & F reports for each school to run. Create a library of reports for Superintendents, District personnel, school personnel and allow for the end users at each school to create their own reports on discipline, grades, attendance etc.

Discuss which tool is the best option based on what data you are looking to report. A hands-on approach is used to learn the techniques of creating reports in each system.

Upon successful completion of this course work, attendees will be able to create custom reports for LEA and District needs

### **Pre-Requisite:**

All who attend this course must have completed the following PD+ courses in PowerSource.

Training Tab>PD+ Courses> PowerSchool Admin Users Part 1,2,& 3

Must be knowledgeable and have a strong understanding of relational database structure: Understand SIS tables structure, experience using SQL; previous database experience for reporting.

**Hardware Requirements for this course;**
